EXPERIENCE

Entronica co., ltd

In Progress

Software Developer (API)

September 2024 - Current 2026

I work as a Full Stack Developer, primarily focusing on the back-end. My responsibilities include developing and managing APIs, deploying systems using Kubernetes and Docker, and analyzing system flows to ensure APIs function efficiently and align with the overall application structure.

● Node JS ● Express ● Postman ● GitHub ● Docker ● Kubernetes ● DrawIO ● Git Flow

Full Stack Web Developer

June 2023 - Feb. 2024

Sabuy technology

Responsible for collecting user needs and designing UX/UI to respond to users and then starting to develop web application systems for the organization.

● HTML ● JavaScript ● SCSS ● Angular ● TypeScript ● C# ● .NETCore ● GITLab ● Docker ● Kubernetes

Software Tester

Nov 2022 - Jan 2023

Muang Thai Life Assurance

Responsible for testing web application systems within the organization. This will be a manual test.

● JavaScript ● GitLab

UX/UI Game Design

Nov 2021 - December 2021

Freelance

Responsible for designing and developing the game's UI page using basic languages HTML, CSS, and JavaScript. Receive compensation after completing that work.

● HTML ● JavaScript ● CSS ● JQuery

SKILLS

Programming Language Skills

- Python Java TypeScript C# JavaScript SQL Lua Golang

Framework Frontend

- React.js Angular Next.js

UI Component Libraries

- PrimeNG PrimeReact Material UI (MUI) Bootstrap HeroUI

CSS Utility-First Framework

- Tailwind CSS Windi CSS Bootstrap Utility API

Framework Backend

- Node.js Express.js ASP.NET Core FastAPI

DevOps / Platform Engineering Tools

- Docker Kubernetes apisix Kong

Knowledge

- Microservices Git Flow basic and Git Flow Suitable for the job

PROJECTS

Game Quiz	Game Quiz 3D - Unreal 4
Java	Blureprint

Web Application for booking Co-Working Space

Project Overview

Our platform serves as a central hub that connects users and partners for booking and managing co-working spaces efficiently. With an intuitive system available on both web and mobile, searching, booking, and managing workspaces becomes more convenient than ever.

Stack : Angular TypeScript C# .NETCore

Web Application HUB For organization Sabuy Tech

Project Overview

The Web Hub Portal is a platform designed to serve as a central hub for managing and accessing various projects in a flexible and easily configurable manner. This system allows new projects to be added and configured without modifying the core web structure. By simply updating the frontend configuration, menus and content are automatically displayed according to the specified values.

Stack: Angular TypeScript C# NET Core

Generator Swagger API By Excel or JSON

Project Overview

This project is a system for reading and importing data from JSON files into MongoDB automatically. It is designed for internal team use, helping to easily update necessary data, reduce the complexity of data management, and improve the accuracy of importing related files.

Stack : NodeJS Express

 github.com/Fuse441/GeneratorSwag

Extension Auto-complete format JSON

Project Overview

This project is part of the development of a VS Code Extension that provides a system to quickly and easily generate JSON structures through Snippets. It helps reduce the time spent writing repetitive JSON files automatically and supports defining standard file structures. This tool is ideal for developers and teams looking to create configuration files efficiently.

Stack : JavaScript TypeScript

 github.com/Fuse441/ac-autocomplete

Extension Generate JSON to MongoDB

Project Overview

This project is a system for reading and importing data from JSON files into MongoDB automatically. It is designed for internal team use, helping to easily update necessary data, reduce the complexity of data management, and improve the accuracy of importing related files.

Stack : JavaScript TypeScript

 github.com/Fuse441/generate

Extention AutoGenerate

Project Overview

autoGenerate is a Visual Studio Code extension designed to assist API development teams by automating tasks related to protocol files, Git branching, and MongoDB scripting.

Stack : JavaScript TypeScript

 github.com/Fuse441/AutoBrancher

Other Extention : <https://marketplace.visualstudio.com/publishers/Demon-APIM>

Building custom script

Project Overview

A lightweight and efficient shellcode loader written in Rust. This project demonstrates various techniques for loading and executing shellcode in memory, leveraging Rust's safety and performance features to bypass basic security detections and interface with Windows APIs.

Stack : Rust
